## RESTRICTED USE PESTICIDE

Because pronamide has produced tumors in laboratory animals, this product is for retail sale to and use only by Certified Applicators or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

## Kerb\* 50-W Herbicide

EPA Reg. No. 62719-397

EPA 24(c) Special Local Need Registration SLN ID-020020  
(For Distribution and Use Only in the State of Idaho)

### For Weed Control in Raspberries and Blackberries

#### ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Kerb\* 50-W herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Kerb 50-W according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Kerb 50-W.

#### Directions for Use

Kerb 50-W is a selective herbicide recommended for fall and winter applications to established raspberries and blackberries for both preemergence and postemergence control of certain winter annual and perennial grasses.

#### Dosage

Kerb 50-W herbicide is recommended at the rate of 2 to 6 pounds of product (1 to 3 lbs. active) per broadcast acre. The rate will depend on the weed species present and the soil texture of the site being treated.

Follow the weed control recommendations listed in the chart below:

Weeds Controlled	Pounds of Kerb 50-W Per Acre Dependable Rainfall or Overhead Irrigation	Comments
Bluegrass, Annual	2.0 – 4.0	Use low rates on light to medium soils and high rates on heavy soils
Ryegrass, Perennial	4.0 – 6.0	
Quackgrass	4.0 – 6.0	

Dosage rates recommended are in pounds of Kerb 50-W per broadcast acre. Reduce rates accordingly for banded applications.

For effective weed control, rainfall or overhead irrigation is essential following the application of Kerb 50-W.

#### Crop Tolerance

Established canefruit are tolerant to recommended rates of Kerb 50-W herbicide. Newly transplanted raspberries or blackberries should be well rooted and transplanted for at least 3 months prior to the application of Kerb 50-W herbicide.

## Timing and Application

Apply Kerb 50-W herbicide only during the fall or winter months. For optimum results, apply Kerb 50-W during November or December. Do not make applications when the ground is frozen. Mix the recommended amount of Kerb 50-W in clean water and apply uniformly with a low pressure ground sprayer in 20 to 50 gallons of water per acre.

## Raspberries and Blackberries--Specific Use Restrictions

- Do not apply more than one application of Kerb 50-W per year.
- Do not apply Kerb 50-W at rates higher than 6 pounds of product (3.0 lbs. active) per year.
- **Chemigation:** Do not apply this product through any type of irrigation system.
